

Dramatically enhance the efficiency of your business operations with the most advanced check/document management software available.

Hedman InterLaser 6 Software by Binatek

The InterLaser 6 Secure Laser Check/Document Module is an interface application which provides the ability to produce and electronically sign checks from blank, colored, perforated check paper stock. You can also produce different forms such as invoices and statements from plain paper stock. Other modules provide a complete document solution. The InterLaser 6 Solution streamlines the entire check production process by automating the steps required with impact printer solutions. Even though blank check paper stock is used, checks with a professional image are created in a single pass on a M.I.C.R. laser printer. The InterLaser 6 Solution handles signatures, logos, M.I.C.R. fonts, company and banking information, check stubs, full page stub overflow, duplicate copies and redirection of duplicate copies. It can add or modify an unlimited number of companies and set up new bank accounts. Security controls enable the master user to assign regular user passwords which control access to the various features of the InterLaser 6 Solution. Check copies are sorted and directed to local or network printers in the most efficient manner. Features optional Smart Card technology for an extremely high level of added security. Implementation of the InterLaser 6 System software can produce operational savings of up to 75%.

InterLaser 6 Manual Document Module

The InterLaser 6 Manual Document Module allows manual entry and production of a single, on-demand document, including checks, gift certificates, business licenses, warranties and a wide range of other items.

The InterLaser 6 Manual Document Module provides customers the ability to create manual checks and other various internal documents securely through embedded encrypted technology. May also be used to provide detailed reports for internal reconciliation.

Ideal for many situations where manual documents, such as checks, need to be issued without the use of preprinted forms. The application makes creating documents quick and easy while maintaining lock tight security measures during the printing process.

LaserPress

LaserPress is an application enabling you to print forms like personal checks, commercial checks, invoices, certificates, tickets, etc... with or without M.I.C.R. encoding. It is ideal for people in the printing business who would like to print forms in small batches on printers, instead of sending the job to press. Very user friendly with unlimited bank configurations.

The Hedman Company and Binatek, Inc.

The Hedman Company

Hedman specializes in the development, manufacturing and distribution of reliable and innovative business machines and systems for check disbursement, money handling and document processing. Hedman is committed to the use of leading edge technology to best fulfill your most critical requirements for high-quality products you can use with confidence.

A pioneer in forgery protection, Hedman was founded in 1914 with the introduction of the first check protection and security system. The device, invented by Herbert R. Hedman, enabled people to write checks manually in Arabic numerals that would shred and macerate indelible ink into the fibers of the check, creating a tamper-proof document. Over the years, Hedman has developed an international reputation for providing dependable systems and well-built machines that outperform competition. Hedman continues in this tradition with InterLaser 6 by Binatek.

Binatek, Inc.

Binatek, established in 1989, is one of Canada's leading innovators and providers of high security document management software systems such as the comprehensive line of InterLaser 6 products. To date, over 600 companies in Canada and the United States utilize these Binatek products in their daily operations, including Caisses Desjardins Credit Union Group, one of the largest such institutions in Canada. Binatek is also the Official M.I.C.R. toner manufacturer of Lexmark Canada and has built an outstanding reputation for quality products and service in the Canadian financial marketplace.

Satisfied users include:

1) Large Southwest Regional Bank

"A great addition to our loan operations department! Allows my staff to print clean and concise checks from multiple accounts with ease. The implementation of the new system and Technical Support for the product is excellent."

2) West Coast Bank & Trust

"The checks are easier to generate, which saves time and effort, and look great! The custom report allows us to research faster and more accurately. Our internal control is much higher now that we have the Smart Card Access Module that is required to access the system in addition to individual passwords for the users."

3) International Defense Contractor

"The combination of hardware and software security measures was an important issue to our company. As a final verification, the Smart Card provides our cost accounting department the assurance that no check will be printed without first inserting the card. The ability to securely print checks remotely on our network is helpful. This was an important issue to our company since we can now control printing checks to one of our out of state facilities without having to print them at the corporate office."
